

Overview

SSH is a cryptographically protected remote login protocol that replaces insecure telnet and rlogin protocols. It provides strong protection against password sniffing and third party session monitoring, better protecting your authentication credentials and privacy. In addition, SSH offers additional authentication methods that are considered more secure than passwords, such as public key authentication and extensive protection against spoofing. This document provides the necessary instruction set to achieve a secure FTP session.

The State Bar of California provides a secure and convenient way to transfer data to or from the State Bar via the Internet. Multiple secure FTP clients, such as WINSCP or WS-FTP, can be used to upload files to the State Bar Secure FTP Server. Access to the State Bar SFTP server will only be gained by using SFTP/SSH connection protocols.

Connection Requirements:

- Completed Access Form
- Secure FTP Client (WINSCP, WS_FTP, etc.)
- Access ID and password
- Public and private SSH2 key if used
- IP (NAT IP) address that will be used for secure session

State Bar IT staff will review completed form and ensure that all required information is provided to establish secure session. State Bar IT staff will contact the requesting agency and facilitate testing process.

State Bar Secure File Transfer Setup Request

Section A : Customer Section Contact information

Provide a technical contact who can work with the State Bar's IT staff to setup the file transfer

Company Name: Please type your company name here

Technical Support Contact Person :

Name : First and Last Name **Phone :** Area Code and Number
